#### **Operating Instructions - BulkLED**

#### **Gerneral Description**

BulkLED fittings are fully automatic self testing emergency lighting luminaires and do not require key switch testing facility.

- 1. Luminaires should only be installed by suitably qualified personnel.
- 2. Installation should be carried out in accordance with the requirements of BS7671 and BS5266 Pts 1, 7 and 8.
- 3. Before installing, connecting or servicing these luminaires, isolate the mains supply to which they are to be connected.

Technical Specification	
Supply Voltage	230V +10% -10%, 50/60Hz
Mode of Operation	Non Maintained or Maintained
Weight	1.9Kg
Emergency Duration	3 hours
Recharge period	24 hours for full duration (14 hours for 1 hour)
Light sources	3 x 1w LEDs High Efficiency white
Battery	2.4V 1500mAh High Temperature NiCad
Ambient temperature	+0°C to +25°C
Degree of Protection	IP65
Conformity	BSEN 60.598-2-22

#### **Testing regime**

Luminaires incorporate fully automatic selt testing and will regularly test for correct lamp (LEDs) functioning and for battery functioning in accordance with a predefined test programme that exceeds the requirements of BSEN50172 / BS5266 Pt.8: 2004.

See separate FASTEL test regime description.

#### Remote control and monitoring (SRM units only)

All SRM version luminaires incorporate remote control and monitoring capability. Luminaires may be connected via collector boxes and interface boxes either to a local computer or to a LAN or Internet connection and remotely controlled and monitored. All SRM luminaires are assigned individual addresses before leaving the factory and should be installed in accordance with the installation plans. Details of the remote control and monitoring operation may be found in separate sheet.

Leading the way in self testing emergency lighting

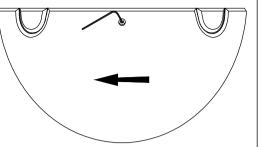

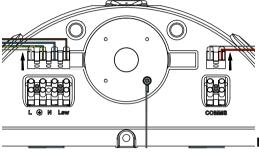

# Installation and Operating Instructions for BulkLED

# Removal of Mounting Plate

1. Remove the BulkLED from the protective packaging. (fig 1) Unscrew the security screw on top of the fitting with the key provided and remove, keeping the screw in a safe place for re-fitting later on.

fiq 2.

fig 1.

(fig 2) With the screw removed rotate the mounting plate on its hinges and disconnect the power & comms cables (if fitted). When the cables have been disconnected slide the mounting plate to the left and off the hinges. Put the front casting back into the protective box to prevent damage during installation.

NOTE: Comms Cable only fitted to Computer Addressable or DALI Fittings.

Wall Mounted

# Removing Conduit Hole Blanking Plates

Pick option **a.** or **b.** to suit your fixing requirements.

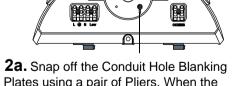

#### Conduit Box Mounted

**2b.** Conduit Hole Blanking Plates do not need to be removed for wall mounted units.

Move onto Step 3b.

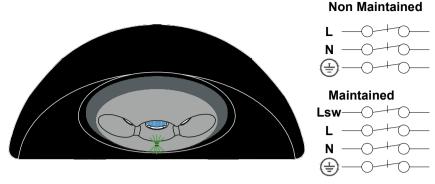

Plates using a pair of Pliers. When the Blanking Plates have been removed use a Half Round File around the edge to remove any sharp edges.

Move onto Step 3a.

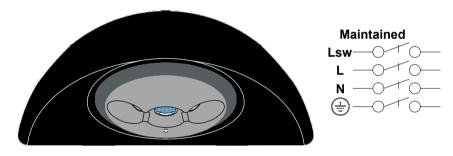

### **Applying Mains Supply**

If fitted see product specification

**10.** Apply mains supply to test the luminaire. The indicator LED will show flashing green and the LEDs will illuminate if the Switched Live supply is connected and switched on.

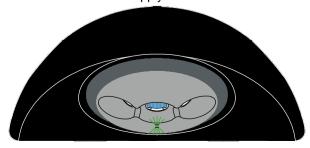

## **Test Emergency Supply**

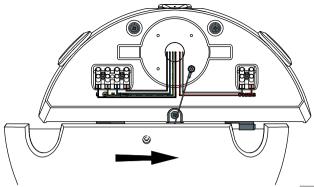

11. To test, briefly fail the supply to illuminate the LEDs from the internal battery. The indicator LED will be extinguished.

#### Reconnect Mains Supply

12. Reconnect the unswitched supply to restart battery charging, indicated by the flashing green indicator LED. Reconnection of the Switched Live will re-illuminate the LEDs from the mains supply if connected for maintained operation.

## 8 Re-Fitting of Front Casting

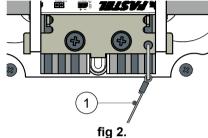

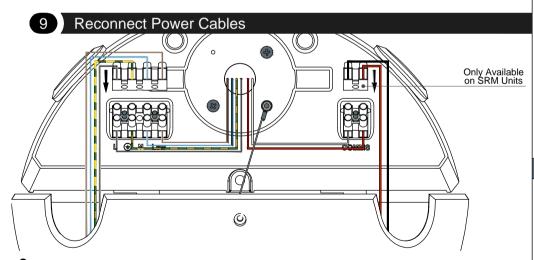

**8.** Take the front casting from the protective packaging and slide the male/female hinges together. See **fig 1**.

fig 1.

With the front casting back on the hinges clip the check strap (#1) onto the gear tray as shown in fig 2.

Move onto Step 9.

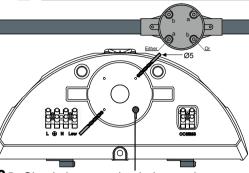

**9.** With the front casting now on the hinges and secured using the check strap, reconnect the power cables from the front casting by plugging the connector blocks back into the mounting plate.

Comms Cable only available on SRM or DALI Units only. See **Step 7** for more information. Move onto **Step 10**.

3 Mounting Plate Fixing Holes

Pick option **a.** or **b.** to suit your fixing requirements.

a Conduit Box Mounted

**3a.** Check the mounting holes on the conduit box and drill out the appropriate holes on the castings using a Ø5mm Drill Bit with the aid of the dimples provided.

**NOTE:** Double check before drilling the holes. Drilling out the wrong holes could severely affect the IP65 rating of the fitting.

**3b.** Look at the back of the Mounting Plate and drill out the wall fixing holes with a Ø6mm Drill bit using the aid of the

Wall Mounted

dimples provided.

More onto Step 4a.

4 Drill Fixing Holes for Mounting Plate

Pick option **a.** or **b.** to suit your fixing requirements.

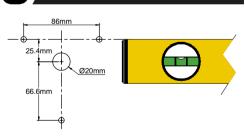

a Conduit Box Mounted

**4a.** For Conduit Box Mounting use the existing threaded holes as shown above. Choose either **a** or **b**.

Move to Step 5a.

b Wall Mounted

**4b.** Using the template printed on the rear of the fitting kit check list ensuring that the 2 Holes at the top are horizontal using a spirit level.

Drill Appropriate holes for fixings and cables. Remember to pass cables through Ø20 holes before fixing plate to wall.

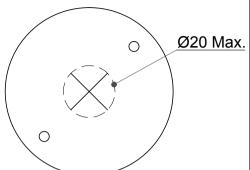

Move onto Step 5b.

Page 2

Pick option **a.** or **b.** to suit your fixing requirements.

a Conduit Box Mounted

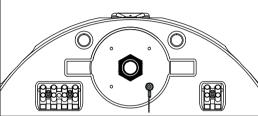

**5a.** Take one of the gaskets provided and cut a cross in the centre no wider than 20mm. This is to allow for cable entry from the conduit box to the BulkLED.

b Wall Mounted

**5b.** Take the Cable Gland provided and remove the nut (#1)

Next Push the M20 Thread through the Ø20 cable entry hole, and refit the nut.

Move onto Step 6b.

**6b.** With the fixing holes now drilled into the wall begin fixing the mounting plate. Take the power cables thread through the Ø20mm cable gland on the casting.

Once the cables are through use appropriate wall fixings to ensure a secure fixing to the wall.

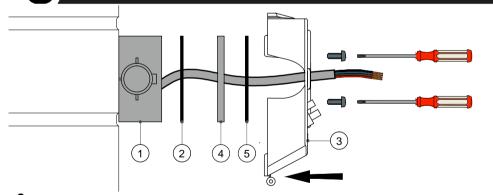

Move onto Step 7.

Move onto Step 6a.

# Fixing Mounting Plate to Wall or Conduit Box

Pick option **a.** or **b.** to suit your fixing requirements.

a Conduit Box Mounted

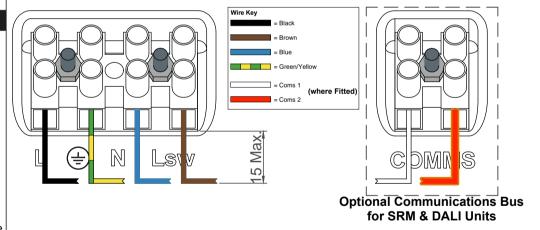

**6a.** With appropriate fixing holes now drilled into the mounting plate and the preparation of the gasket complete the mounting plate can be fixed to the conduit box. Take the gaskets (# 2) and place in between the conduit box (# 1) and the rear casting (# 3). Thread the cables through the gasket and rear casting, once in place use the M4 fixings screws provided to fix the mounting plate to the box.

**NOTE:** For shallower conduit boxes a 5mm spacer ring (**# 4**) and extra gasket (**# 5**) have been provided to ensure a good water tight seal. Remember to repeat Step 5a. for the additional gasket.

Move onto Step 7.

Wall Mounted

**7.** Wire the connector block as per the guides on the casting. In case of maintained operation the switched live must be connected to Lsw terminal. Note the switched live and the unswitched live must originate from the same phase.

**NOTE:** Ensure that the cables are no more than 15mm away from the bottom edge of the connector block. This is to prevent the cables interfering with the foam seal. Comms connector only applicable to SRM or DALI units, see back of instructions for information.

Move onto Step 8.
